MAN attractive for mechanical engineering, electrical engineering and economics graduates

Each year, members of the MAN Group active in the fields of Commercial Vehicles, Industrial Services, Printing Machines, Diesel Engines and Industrial Equipment and Facilities provide jobs for some 230 university graduates. Focus is on qualifications in mechanical engineering, 45% of the new recruits having studied this subject, followed by electrical engineering, electronics and economics (each 15%), as well as industrial engineering and informatics (each 10%). According to a recent survey by the trendence institute, those beginning their careers at MAN value the diversified structure with its varied development opportunities and prospects for advancement within MAN Group companies. The high level of technological performance and diverse fields of engineering technology are an added attraction for university graduates.

On 26 and 27 November 2003, the MAN Group will be represented with a large, attractive stand for applicants at the *Absolventenkongress* (Graduates Convention) in Cologne, organised each year by the publishing company Forum Verlag GmbH. The *forum absolventenkongress* has been held for the last fourteen years and is the leading event in the recruiting sector in Germany. This year, over 250 companies will be presenting themselves to several thousand visitors - students about to take their exams, graduates and young professionals.

Those interested in making contact will have an opportunity to talk to young MAN Group executives at the fair. Representatives of the various specialised fields will also be available to answer applicants' questions. You will find contacts from MAN in hall 13/2, booth B/C 4.
