

LESS FRICTION, MORE EFFICIENCY.

MAN Genuine Oil.

MAN GENUINE OIL: SMALL DIFFERENCE, BIG IMPACT.

The whole has to be better
than the sum of its parts.

Perfectly aligned components throughout allow MAN Genuine Parts to be the best in motorisation and technology. With MAN Genuine Oil, we offer an enhancement for the core components of a MAN vehicle – engine, gearbox, driven axles and transfer cases. MAN Genuine Oils are proven to provide ideal protection against wear and thus help to increase the vehicle's service life and lower its total cost of operation (TCO). **Only MAN's best oil is good enough for your MAN. MAN Genuine Oil.**

MAN GENUINE OIL.

Many years and millions of kilometres later.

The hardest test is putting it into practice on the world's roads, day after day, month after month. And it is here that the performance of an oil is put to test under real-life, day-to-day stresses and strains: strong vibrations, dirty air, stop-start driving, frequently using the engine brake and much more. Over many years we have tested different types of oil for engines, gearboxes, driven axles and transfer cases in extensive road tests. The components were then disassembled, inspected and assessed by our engineers. If they revealed signs of deposits or increased wear, then the oil in question was not approved. Only the oils that have been shown to pass these tests, i.e. that have proved to be ideally suited to our vehicles, receive the MAN seal of approval.

MAN GENUINE ENGINE OIL.

High-performance oil for high-performance engines.

A smooth drive – that alone hasn't been enough for a long time now. Modern engines have to fulfil the highest performance and efficiency requirements as well as have low emissions to help protect the environment. Sophisticated technical components and exhaust gas after-treatment also have to work perfectly and reliably, even under extreme climatic conditions. This can be achieved by using high-quality engine oils that meet the technical and chemical requirements posed by MAN's trucks and buses. In other words, with MAN Genuine Oil quality.

Quite simply.
Why you should choose
MAN Genuine Engine Oil:

- Service intervals of up to 140,000 km*
- Service intervals for diesel particulate filters of up to 850,000 km
- Longer service life, even under extreme conditions
- High efficiency and performance with minimal oil usage
- Cleaning effect helps to stop sludge forming.
- Can reduce fuel consumption and CO₂ emissions.
- Helps to reduce the total cost of operation (TCO)
- Also available in a handy 5-litre canister
- The portfolio is reviewed continually in light of technical developments – it is adjusted and extended if required

MAN Genuine Engine Oil is also available for the MAN TGE.

* for MAN D20 and D26 engines

MAN GENUINE GEARBOX OIL.

Helps convert power into performance.

The power inside the engine should go back where it belongs: on the streets. The gearbox is crucial for this. Its perfect functionality allows for maximum efficiency, which can only be achieved with high-quality gearbox oil. Tested especially for use in MAN trucks and buses, MAN Genuine Gearbox Oil meets these requirements extremely reliably even in extreme conditions. Turning power into more performance.

Quite simply.
Why you should choose
MAN Genuine Gearbox Oil:

- High oxidation resistance and thermal stability, even with long intervals between oil changes.
- Ideal viscosity for problem-free cold starts and perfect shifting at low temperatures
- Higher gearbox service life even in extreme driving conditions and outdoor temperatures
- High efficiency and performance
- Cleaning effect helps to stop sludge forming
- Can reduce fuel consumption and CO₂ emissions
- Helps to reduce the total cost of operation
- The portfolio is reviewed continually in light of technical developments – it is adjusted and extended if required.

MAN GENUINE AXLE OIL.

For an ideal distribution of power.

In the engine/gearbox assembly, the driven axles and transfer case are the final components when it comes to power transmission. They also need to work perfectly for the whole system to reach maximum functionality and efficiency. This requires an oil that is perfectly aligned with technology and that demonstrates these properties reliably even under extreme conditions and a tried-and-tested oil that has been proved to have these qualities: MAN Genuine Axle Oil.

Quite simply.
Why you should choose
MAN Genuine Axle Oil:

- Long service life for driven axles and transfer cases even in extreme driving conditions and outdoor temperatures
- High efficiency and performance
- Cleaning effect helps to stop sludge forming
- High oxidation resistance and thermal stability, even with long intervals between oil changes.
- Can reduce fuel consumption and CO₂ emissions
- Helps to reduce the total cost of operation
- The portfolio is reviewed continually in light of technical developments – it is adjusted and extended if required.
