MAN Truck & Bus – A member of the MAN Group

SAVE ON COSTS, NOT ON PERFORMANCE.

MAN Genuine Parts ecoline.

TURN OLD

A CLEVER REMANUFACTURED PARTS PROGRAMME.

MAN Genuine Parts ecoline.

Has your vehicle reached its fourth year of service? If so, you can rely on our high-quality MAN Genuine Parts ecoline product range for a cost-effective repair in line with the current market value. This saves not only costs but also time, as all parts are available at every MAN centre. This means that your vehicle is back on the road sooner.

In the MAN Genuine Parts ecoline product range for all MAN vehicles, used parts undergo professional remanufacturing in line with MAN Genuine Parts standards, either through MAN, the original manufacturers (OES) or audited partner companies. As part of this, the used parts are carefully tested and cleaned and all wearing parts are replaced.

This intensive remanufacturing means that the MAN Genuine Parts ecoline remanufactured parts programme is constantly growing. We will therefore be further expanding our range of parts that can be recycled in the remanufacturing process, since returned used parts (cores) are the raw material for efficient remanufacturing.

→ Your advantages:

- Upkeep of the vehicle in line with its current value as the total cost of ownership is reduced by lower repair costs
- Quicker return to the road due to replacement instead of repair
- The same Genuine Parts quality as all parts are fully checked
- High reliability as the parts have the same specifications as MAN Genuine Parts, including the warranty
- Environmentally aware as remanufacturing protects resources
- Time and effort saved because Genuine Parts ecoline are available at every MAN service centre
- Always represents the latest developments in technology

MAN Genuine Parts ecoline products are available for all vehicles in the series TGX, TGS, TGL, TGM, TGE and bus/coach.

→ An overview of our range.

Demand for the MAN Genuine Parts ecoline remanufactured parts programme is constantly growing. We will therefore be further expanding our range of parts that can be recycled in the process, since returned used parts (cores) are the raw material for efficient remanufacturing.

1 Engine
