

TRACTION IN ACTION.

Simply my truck.

MAKING MORE OUT OF LESS.

Increasing performance and reducing costs – that's the effective, the efficient way to leave competitive pressure standing. MAN construction site vehicles do an excellent job in getting you there. They're dependable, rugged and hard-wearing, their payload is optimal, they perform more than well on the road, and with optimal traction they make sure you safely encounter any off-road situation. Innovative solutions play a big part in the enhanced efficiency of MAN trucks. Best of all, find out for yourself.

MAN TRUCKS

From tippers to truck mixers – the entire range and flexibility offered by our trucks.

PAGES 06–23

EXCELLENT DRIVER FIT

The cockpit design ensures maximum driving performance coupled with perfect ergonomics, intuitive operation and a high level of comfort.

PAGES 24–39

GREAT EFFICIENCY AND ECONOMY

MAN trucks combine innovation with reliability – to achieve maximum transport efficiency.

PAGES 40–45

CONNECTED

STRONG PARTNER

Thanks to a variety of digital solutions and close to 1,700 MAN dealerships worldwide, MAN is there for you – any time, any place.

PAGES 46–51

MAN TGE

The star amongst light commercial vehicles is a dynamic all-rounder designed for all types of tasks.

PAGES 52–59

OPTIMISED UPTIME

Intelligent fleet and maintenance management, financing and mobility services to keep business reliably rolling along.

PAGES 60–67

IT'S THE VERSATILITY THAT DOES IT.

Construction without a tipper? Impossible. Whether they've loaded bulk material, excavated material or asphalt or are carrying equipment, without the versatile carrier, literally nothing on the site would run.

The MAN TGL Tipper is a lightweight vehicle which performs exceptionally in the weight classes of 7.5 to 12 tonnes. The MAN TGL, as a tipper or crane-tipper, is ideal for main construction and subconstruction works as well as garden, landscaping and many other applications. MAN also offers this truck ex works as a complete three-way tipper, ready for operation right away, and optionally with preparation for a crane. With the powerful torque of its common-rail diesel engine, its reliable gearbox designed for construction site and distribution transport, and its stable yet lightweight frame, the MAN TGL has everything a tipper vehicle requires.

Top class in the medium class, that's the MAN TGM in the segment from 12 to 18 tonnes as 4x2 for 12, 15, 18 and 19 tonnes, and also as 4x4 with 13 and 18 tonnes and 6x4 with 26 tonnes. It carries a high payload, is flexible and stable, just made to be a tipper that can take it away. The 13-tonne and 18-tonne models with permanent or selectable all-wheel drive will convince you with their outstanding traction and off-road ability. The differential lock is electronically managed, while electronic transfer case management can be fitted as special equipment. Unique technology for a vehicle in this class, the air-sprung rear axle is electronically controlled to maintain a constant ground clearance level, regardless of the load.

The crew cab for the MAN TGL and MAN TGM series is in a class of its own in terms of size. With its row of four seats in the rear plus the optional second co-driver's seat, it offers space for up to seven people (6+1).

THE TRUCK FOR ALL CASES.

As a solo vehicle, as a tractor for trailer operation or as a semitrailer tractor, the MAN TGS provide the answers in every case.

With a high degree of reliability, the 18 to 44-tonners master just about every transport job you could think of in the construction industry. If rear-wheel drive is not enough, there are variants with MAN HydroDrive®, permanent or selectable all-wheel drive right up to 8x8. MAN is the first manufacturer of commercial vehicles to introduce selectable hydrostatic front-wheel drive: MAN HydroDrive® for more flexibility and traction for vehicles operated mainly on paved roads. MAN's long experience in this field, the great reliability of the MAN HydroDrive® and the availability of a wide range of variants, from two-axle to four-axle vehicles, are unrivalled. MAN HydroDrive® is available in combination with MAN TipMatic® or manually operated gearboxes.

Technologies that make sense, such as EasyStart, give the driver some useful assistance. And speaking of the driver: the narrow driver's cabs for the MAN TGS are ideal for construction sites, a particular advantage being that their low weight allows a high payload.

TGS vehicles are available with two, three, four and five axles, with the required load-bearing capacities, wheelbases and frame overhangs and with economical high-torque engines.

Maximum performance thanks to MAN TipMatic® with special off-road driving program, higher gearshift speeds, rock-free mode as well as slope and load detection distinguish the TGS in off-road operation. Operation of the gearbox using the right control stalk is a completely new development. Both driving mode and driving program are selected by means of the stalk switch. Controls located in easy reach near the steering wheel and electric parking brake make for certainty in operation.

MAN

H AN 520

BIG ON COMFORT, BIG ON POWER.

Perfect ergonomics, high productivity and low transport costs are the hallmarks of our TGX series tippers.

The MAN TGX is built to impress. It redefines workplace comfort with wide cabs. With ample interior space and an assortment of practical details, it makes the driver's job a good deal easier. In operation, the high-traction, dynamic MAN TGX 4x2, 4x4H, 6x4 and 8x4-4 demonstrate why they occupy an efficiency class of their own. The MAN Common Rail engines produce high power with low fuel consumption. As a result, the MAN D38 power units with 397 kW (540 hp), 427 kW (580 hp) and 471 kW (640 hp) are setting records in terms of performance and efficiency.

The MAN TipMatic® gearbox therefore fits perfectly with the integrated EasyStart moving-off aid, MAN EfficientCruise® with EfficientRoll, speed shifting, optimised manoeuvring feature, idle speed driving, and rock-free mode. It reduces the pressure on the driver, eases the load on the driveline and saves diesel. The intelligent assistance and safety systems increase transport safety, reduce fuel consumption and reduce wear.

In terms of safety, the EVBec® engine brake with Pritarder in the MAN D26 engine produces an enormous braking power of up to 625 kW even at medium engine speeds, which enables safe and wear-free downhill travel.

The MAN D15 engine has very good dynamic handling thanks to its optimal turbocharger configuration, and offers more payload as compared with the MAN D20. The weight of the engine has been reduced by approx. 230 kg, and fuel efficiency has been increased. Even at low engine speeds, the maximum torque is available. The MAN TurboEVBec in conjunction with the MAN D15 engine enables gradual regulation of engine brake output up to a maximum of 350 kW (in combination with the power level 400 hp, otherwise max. 330 kW). In addition, numerous optimisations of the MAN D26 engine concept result in greater power for the same low fuel consumption and a weight reduction of around 80 kg.

Construction-site rise with support rail on roof

Protective headlight grilles

Steel bumper with centred towing eye and hinged front step. Particularly robust protective grille in front of radiator

Protective guard in front of radiator

Lowest step fitted with a swing-type function made out of an especially elastic plastic

Partially raised exhaust system

Exhaust system, side, right

Rear underride protection

PERFECT IN EVERY DETAIL.

Just how much practical experience is packed into every MAN tipper can be seen by the many ingenious solutions for every task.

Whether it's the convincing axle and suspension systems for all requirements, the powerful engines or the variety of drive formulae, at MAN you get the tipper you want, perfectly equipped from its robust steel bumper to its fold-back rear underride guard, the reference level for functionality and efficiency.

Vehicle configuration (partly optional):

- Planetary hub or hypoid axles, light MAN TGS tandem hypoid axle
- Parabolic, trapezoidal, air or construction air suspension with internal stabilisers
- High-torque engines up to 471 kW (640 hp)
- MAN D15 engines with up to 294 kW (400 hp) for weight-optimised vehicles
- Air intake directed upwards with or without pre-filter for the engine
- Permanent and selectable all-wheel drive, differential lock and transfer case management
- Weight-saving MAN HydroDrive® (MAN TGS, MAN TGX) for a range of deployments right up to the construction site
- MAN TipMatic® Offroad (MAN TGM, MAN TGS, MAN TGX), MAN TipMatic® for the MAN TGL
- Robust three-part steel bumper with centred towing eye
- Robust radiator protection
- Solidly secured frame attachments (battery boxes, tanks)
- Fold-back or rigid rear underride guard
- Raised or partly raised exhaust or side exit exhaust
- Construction-site hinged step unit
- Construction-site rise with support rail on roof
- Equipment for snow clearing, standardised attachment plate
- Electronic braking system MAN BrakeMatic®
- Electronic driver assistance systems ABS, ASR, ESP, LGS, EBA, ACC Stop&Go and Lane Return Assistant, depending on vehicle type
- MAN TGS 5-axle truck from MAN Individual
- MAN ComfortSteering for low steering forces and good tracking
- 10-tonne front axle for special bodies on three- and four-axle trucks (6x4, 8x4)
- Digital axle load indicator on vehicles fitted with air suspension
- Paver brake
- Turning brake

MAN IS THE SOLUTION.

MAN chassis with interchangeable systems – that which belongs together comes together.

The range includes chassis from 7.5 to 44 tonnes for set-down and roll-off skip loaders, tippers, containers and silo erectors of every size and type. You can get them as two-, three-, four- or five-axle versions with the load capacities, wheelbases and overhangs you require, with economical engines delivering high torques, and ergonomic driver's cabs for every purpose. The range of drive formulae runs from 4x2 to 8x8 to 10x4. One of these powerful types is the MAN TGM 18-tonner, with its record-breaking payload. A unique idea, and one that will keep you moving, is the selectable hydrostatic front-wheel drive MAN HydroDrive® for MAN TGS and MAN TGX. Particularly when combined with steered leading or trailing axles, this brings unbeatable manoeuvrability, weight and traction.

For optimal traction, regardless of loading height we offer the variable axle load ratio for vehicles with a leading or trailing axle. The drive axle is fully loaded until it reaches the prescribed axle load. Afterwards, the additional load is absorbed by the auxiliary axle – without lowering the drive axle load. The axle load is therefore not fixed but rather distributed variably between the rear axles, so that the drive axle has sufficient traction in any loading condition and the legally prescribed minimum axle load is not fallen short of whatever the load. The system does not have to be switched on separately; it is always active.

MAN ComfortSteering system helps the driver to steer and forms the basis of other assistance systems such as Lane Return Assist (LRA). Because the steering forces are adapted to the road speed, the strain is taken off the driver and there is ease of movement when manoeuvring and ability to stay in a lane at high speed.

FLEXIBILITY IS TRUMPS.

When all-round transport solutions with the highest degree of flexibility are required, then interchangeable systems are exactly what you need.

You operate vehicles for demolition materials and site waste as well as scrap or recyclable waste, also with interchangeable systems for transporting building equipment or other devices. Minimised downtimes mean that roll-off and set-down skip loaders produce high transport performance. They are easy to load and unload, they make transfer-handling superfluous, and in addition to all versions, they can also be used for interim storage. Last but not least, they are able to carry out widely-differing transport tasks, thanks to the compatibility of various containers. These are some of the positive points that enable roll-on and set-down skip loaders to render services that are quickly recognised as outstanding.

Vehicle configuration (partly optional):

- Two-, three-, four- and five-axle versions with trailing axle, leading axle and/or tandem axle unit
 - Parabolic or air suspension, depending on the operating requirements
 - Springs/dampers adjusted for the roll-off and set-down skip loaders' high centre of gravity
 - CDC (Continuous Damping Control) roll stabilisation as special equipment
 - Construction-site version in medium height with steel bumper and planetary axles
 - Primarily for road deployment in normal design, also with hypoid axle or lightweight hypoid tandem axle
 - Complete range of engines from 118 kW (160 hp) to 471 kW (640 hp)
 - Sector-specific parameterisation of the intermediate speeds
 - Gear ratio spread as required by type of operation and corresponding rear axle ratio
 - Optimal, branch-related driving programme with the MAN TipMatic® Offroad
- Automatic lowering of air suspension on rear axle ex works
 - The right power take-offs for all requirements
 - Variable axle load ratio for chassis with a trailing or leading axle for optimum traction
 - MAN ComfortSteering for low steering forces and good tracking
 - Adaptive Cruise Control ACC with Stop&Go function
 - The Lane Guard System (LGS) with Lane Return Assist (LRA) helps keep the vehicle in its lane and actively prevents it straying from the lane, depending on the wheel configuration
 - On vehicles equipped with MAN HydroDrive®, a power take-off at the flywheel end is available for body manufacturers
 - MAN HydroDrive® for an expanded range of operations

MAN KNOWS WHAT MAKES THE WORLD GO AROUND.

When it comes to transporting concrete from the mixing plant to the construction site, speed, reliability and a maximum of payload are crucial: after all, the concrete has to be delivered just in time if the construction work is going to progress.

If you're looking for a safe bet, go with MAN. Whether it's an extremely light chassis with optimum payload that you want, a truck with high load reserves, or a heavy-duty vehicle with maximum transport capacity, we have the solution you're looking for.

Solutions for all requirements.

Truck mixer chassis from MAN combine innovative technology with high economy – a winning mixture wherever you are. The classic European vehicle has to be the 8x4 in the MAN TGS series, a truck that fulfils the customers' most important requirements to a T. As a 32-tonner optimised in terms of weight and fitted with the MAN D15 engine and light hypoid tandem axle, it provides the biggest payload advantages in its class. Despite weight optimisation, MAN truck mixers are suitably equipped for the sector. For special requirements MAN offers the 8x4H-6, which combines efficiency and traction as required with maximum manoeuvrability. The MAN TGS 4x4H semitrailer tractor with MAN HydroDrive® for mixer trailers is a concept for special requirements. The MAN range is rounded off by the three-axle version with 26 tonnes gross vehicle weight, which is available as 6x4 in the MAN TGS range.

Getting right up there with MAN.

They have made building more rational and more economical, they have reduced the physical labour, they have rendered special feeder equipment superfluous. Concrete pumps are worth their weight in gold, even though the investment costs for the core pump and the distribution mast are high, but that is precisely the reason why the base has to be right. What is required here are absolutely reliable chassis that are prepared for the most economical fitting of bodies possible.

There's still no place on a construction site that can't be reached by the concrete pumps on MAN's 6x4, 8x4 and 10x4 chassis. The MAN TGS three-axle version can take concrete pumps with a mast length of up to 39 metres, the four-axle up to 48 m and the 5-axle up to 60 m. Components such as battery compartments, air tanks and exhaust systems are arranged so that the mounting of the concrete pump is straightforward. MAN offers this concrete pump preparation feature ex works.

Ergonomic driver's cabs for short journeys are available. The development effort that we at MAN have invested in these vehicles, highlights our claim that we provide our customers with the optimal transport solutions. And that includes service: there are 1,700 support outlets worldwide, ready to serve you.

Vehicle configuration (partly optional):

- Preparation ex works for straightforward, economical mounting of drum
- Springs and stabilisers adjusted for high centre of gravity
- Extremely resilient planetary drive axles with good ground clearance, alternatively hypoid axles or light MAN TGS tandem hypoid axle with ground clearance almost as large as planetary axles
- High-torque engines with EDC control for stable engine speeds when mixing
- Preparation for switching engine on/off externally
- External selection of engine speed for various mixing tasks
- Engine-dependent power take-offs for mixer hydraulics, designed for high torque load
- Low frame top edge
- Bleeding of compressed air to pressurise the water tank
- ESP as special equipment for 8x4 as solo vehicle version
- Exhaust system for two- and three-axle versions: standard or raised; for four-axle version: standard or partially raised
- Lateral underride guard included in scope of delivery
- Thrust plate for attaching the superstructure subframe
- Window in rear wall of driver's cab is special equipment and provides an angled rearward field of vision
- MAN ComfortSteering for low steering forces and good tracking
- Adaptive Cruise Control ACC with Stop&Go function
- Lane Guard System (LGS) including Lane Return Assist (LRA) helps keep the vehicle in its lane and actively prevents it straying from the lane, depending on the wheel configuration
- Meets the off-road vehicle (N3G) criterion at normal design height
- MAN D15 engine with a weight advantage of approx. 230 kg as compared to the MAN D20 engine
- Special truck mixer chassis for 8x4 (weight optimised)

THE PERFECT CHOICE FOR THE JOB.

Within the broad scope of construction-site applications, there is really nothing that our vehicles cannot do. Wherever there is a need for reliable services, a MAN is on the scene.

The comprehensive MAN vehicle range, which includes the MAN TGL, TGM, TGS and TGX series, ranges from 7.49 to 44 tonnes. Thanks to our wealth of experience and close cooperation with body manufacturers, we are able to provide you with the ideal vehicle solution for each and every task.

TAILOR-MADE TRUCK.

Life is all cakes and ale – at least with MAN Individual. We can upgrade your truck to suit your wishes and requirements. This will make it exclusively unique – from a first glance at the design right up to a feeling of well-being throughout the entire driver's cab. You have the choice when it comes to the cab, chassis, driveline, electronics and body – and we have the right solutions.

Precisely as with the standard chassis, with MAN Individual you are building upon excellent MAN quality excelling in outstanding reliability and safety. And what's more: After delivery of the modified chassis, you benefit from our guarantee and warranty.

One-stop service

You get everything from one source, thus always having an overview of the costs. From order preparation and design right up to production, quality assurance and delivery, your personal contact partner will ensure that you receive your desired vehicle or your ideal chassis rapidly and straightforwardly. Completely individually. MAN Individual.

Contact your seller to let them know your individual requests. Working together with MAN Individual, they will find the best solution for you. Our specialists will handle your specific requirements, providing the high standard of quality you expect from MAN.

Examples of modifications for construction uses:

- Preparation for skylifters
- Preparation for crane body
- Preparation for concrete pump
- Terraces for extension booms (concrete pump, skylifters, crane)
- Space for support
- Relocation of frame attachments as is typical for the sector
- High degree of flexibility and quality in the design
- Vehicles comply with standards following conversion
- Five-axle vehicle ex works
- Brake system for concrete pumps
- Sector-specific parameter setting
- Wheelbase and overhang modifications
- MAN After Sales provides global support and supply of spare parts

- 1 Language recognition via driver card
- 2 Preparation for Alcohol Interlock
- 3 Sensor system for the fifth-wheel coupling

DRIVING IN COMFORT.

With automatic language recognition via driver card, activated via MAN Now, the language saved on the card is automatically adopted as the “vehicle language” after inserting the driver card into the tachograph (when the ignition is switched on) and does not have to be set or selected manually via the vehicle menu. Manual language setting via the vehicle menu remains available, so that a language other than the one stored on the driver card can be subsequently selected.

28 languages are available. The languages German and English are available in every vehicle. In countries where RIO is offered, additional languages are also available subsequently free of charge via MAN Now.

Preparation for Alcohol Interlock

Traffic accidents caused by alcohol are particularly annoying because they are absolutely preventable. The driver must react in a fraction of a second even in a sober state, e. g. to avoid an impending accident. Under the influence of alcohol, this is impossible. With the preparation for connecting a device for determining the alcohol content in the breath, the engine can only be started if a maximum permissible alcohol content (may vary from country to country) is measured in the air tested.

The electronic blocking of the engine start by the alcohol tester can be cancelled or bypassed (depending on the version, for example in emergencies) by pressing a secured button. Please note: This is only permissible for certain countries.

Sensor system for the fifth-wheel coupling

The sensor system of the fifth-wheel coupling enables safe and convenient sensor-supported monitoring of the coupling and uncoupling operation from the driver's workplace. This prevents damage due to incorrect coupling processes. For a controlled and guided coupling process between the semitrailer tractor and semitrailer, displays and text messages are shown to the driver on the instrumentation display as a sub-item of the air suspension menu. If a coupling process has been completed correctly, this is also confirmed by an acoustic signal. Please note: The pre-departure check remains mandatory despite the indication of the locking status in the driver's display.

INCREASED SAFETY.

Front Detection

Whether in the delivery zone of a supermarket, when leaving the workshop or in hectic inner-city traffic: people may be located directly in front of the vehicle where they are difficult to see. **When moving off and at speeds of up to 10 km/h**, Front Detection monitors the close range in front of the vehicle, which is difficult or impossible for the driver to see, and warns the driver in two stages if it has detected particularly vulnerable, “weaker” road users, such as pedestrians or cyclists. Front Detection thus helps to increase safety and prevent accidents. It relieves the strain on the driver, in particular during urban driving.

Front Detection supplements the Emergency Brake Assist EBA Plus, which includes a comparable protective function for particularly vulnerable road users, but only becomes active at speeds above 10 km/h.

Emergency Brake Assist EBA Plus

In an emergency, automatic brake intervention until full braking – this has previously saved lives in the event of an impending collision with other vehicles. But what happens if pedestrians or cyclists suddenly enter the driving area? The enhanced Emergency Brake Assist warns and now reacts to these more vulnerable road users as well. The Emergency Brake Assist EBA Plus warns the driver of an impending collision **at road speeds of 10 km/h and above**. In the event of an emergency, if a collision hazard is detected, automatic braking intervention takes place even to the point of standstill – also for vulnerable, weaker road users such as pedestrians or cyclists. Available on demand in a version that cannot be switched of.

- 1 Front Detection
- 2 Emergency Brake Assist EBA Plus

FURTHER ASSISTANCE SYSTEMS.

Direct call-up of central operating menu for assistance systems

A new button directly opens the central operating menu for configuring the assistance systems available in the vehicle. This simplifies switching on and off as well as configuration of all the available assistance systems – especially with frequently changing drivers. Depending on the equipment, the button for central operation of the assistance systems is located either on the multifunction steering wheel or in the assistance system key panel on the instrument panel (for vehicles without multifunction steering wheel). There is also a button for temporary switching off the acoustic signals of the assistance systems.

Long-haul transport assistant MAN CruiseAssist

Across the entire permitted speed range on motorways and main roads similar to motorways with structural separation of lanes, the long-haul transport assistant MAN CruiseAssist automatically controls the driveline, brakes and steering, if necessary decelerating to a full stop behind a vehicle that is stopping and, in the case of brief stops, automatically moving off again. MAN CruiseAssist guides the vehicle continuously by means of gentle steering interventions. The system uses the detected lane markings as orientation.

Lane Change Collision Prevention Assist

The MAN Lane Change Collision Prevention Assist uses radar sensors to monitor the areas to the left and right of the vehicle's lane. If the sensors detect that changing lanes would result in a dangerous situation, the driver is warned in good time. If the vehicle nevertheless leaves the given lane – also if the turn indicator has been actuated – the Lane Change Collision Prevention Assist steers it back into the lane by means of a corrective steering torque.

Lane departure warning (LDW)

An acoustic signal warns the driver if they drift out of their lane. Available on demand in a version that cannot be switched off.

Lane change support (LCS)

Lane Change Support LCS monitors the lanes on the right and left next to the vehicle with the aid of radar sensors from a driving speed of 50 km/h – up to approx. 30 m towards the front and up to approx. 80 m towards the rear. If the sensors detect a dangerous situation when the vehicle is changing lanes, the driver is warned in good time so that they can prevent a potential collision with other vehicles.

Lane return assist (LRA)

If the truck departs from its lane, corrective steering guides the vehicle back. The vehicle is automatically steered until it reaches the normal lane position; it is not kept in its lane continuously.

Turn Assist

Turn Assist monitors the difficult-to-see side area next to the vehicle (co-driver's side) with the help of radar sensors at road speeds of up to 30 km/h. If the sensors detect a dangerous situation when the vehicle is turning off, the driver is warned in good time so that they can intervene and prevent a possible collision with other road users.

Traffic jam assist

On motorways or other well-constructed major roads, the traffic jam assist can independently operate the vehicle's drivetrain, brakes and steering. It slows behind a stopping vehicle ahead until coming to a stop and moves the truck forward again by itself.

ACC Stop&Go

The ACC with Stop&Go feature automatically controls speed and the distance from the vehicle in front. The desired speed is maintained without the driver having to operate the accelerator. The truck automatically brakes until it comes to a standstill and moves away again after short stops.

Distance warning system

The distance warning system helps to maintain the required, generous safety distance to the next vehicle. After an acoustic or visual warning, the driver can correct the distance so that more reaction time remains for unforeseen situations.

MAN AttentionGuard

MAN AttentionGuard is an attention assistant based on the principle of lane monitoring. Within the limits of the system, starting at a speed of approx. 60 km/h it detects reduced driver alertness in good time. A visual as well as acoustic warning supports the driver in refocusing their concentration on the road – thus we help reduce a possible accident due to lane departure. Compared with the previous version, the enhanced MAN AttentionGuard continuously evaluates the driver's directional accuracy, steering interventions and other parameters. The uniformly specified, scientifically recognised rating scale (Karolinska Sleepiness Scale, KSS) is used to calculate and estimate the driver fatigue level. The driver is warned when a specific stage on this rating scale has been reached.

FURTHER ASSISTANCE SYSTEMS.

Traffic sign recognition system

The traffic sign recognition system uses the new video camera on the windscreen to detect road signs on the route in front of the vehicle and displays the permitted maximum speed on the instrumentation display. This applies to both traffic signs that show a specific speed limit, as well as town boundary or motorway signs. If the permitted maximum speed is exceeded, the system warns the driver visually and, if necessary, also acoustically.

For vehicles with navigation system, the system combines the optically recorded data with stored navigation data. This means that the system can also react accordingly to current changes in signs – which are not shown in the existing navigation data. Other country-specific and vehicle-specific restrictions such as no-overtaking or no-entry restrictions can also be shown on the display.

Tyre pressure monitoring system

The tyre pressure monitoring system (TPM) with display of tyre temperature uses sensors to determine and monitor the air pressure and temperature in the vehicle tyres – including the spare wheel (here only air pressure). If the air pressure is too low/too high in comparison to the nominal pressure or the tyre temperature is too high, the driver is warned by means of a display in the instrumentation. As standard available for the entire range up to and including 4-axle vehicles. The function autolearn/autolocate automatically learns the sensors and their position so that the wheels no longer have to be fitted in the same position; there is no need for a workshop visit to re-initialise the sensors with the correct position.

Driver's airbag*

The airbag integrated into the steering wheel and the seat belt tensioner incorporated into the belt lock on the driver's side are activated in the event of a collision via a joint trigger: if a critical deceleration of the truck is detected, the activators for the airbag and belt tensioner launch in parallel.

High-beam assist

Depending on the driving situation, high-beam assist optimises use of the main beam. It prevents the drivers of oncoming vehicles or vehicles in front from being dazzled by automatically dipping the headlights.

Side camera system (SCS)**

The side camera system is an integrated camera system for assisting in turn-off procedures. It makes it easier for the driver to observe those areas next to the vehicle that are difficult to see (co-driver's side). The video feed is transmitted to an optional additional monitor (only for vehicles with conventional mirrors) on the co-driver A-pillar or to the media display.

Video Turn Assist (VTA)**

Video Turn Assist expands object recognition by comparison with the side camera system (SCS): Objects are detected in an area of 2.5 m x 6 m to the right of the vehicle and the monitor display is supplemented by a warning to the driver in the form of an acoustic signal from the loudspeaker built into the vehicle. The video feed is transmitted to an additional monitor (only for vehicles with conventional mirrors) on the co-driver A-pillar. In addition, an optical display lights up and an acoustic signal is emitted.

360° view assistant BirdView**

The camera system for a 360° live view 'from above' seamlessly displays an area of up to four metres around vehicles with fixed bodies (e.g. fire-fighting, beverage or waste-disposal vehicles). Stitch-and-blend technology combines four camera views (front, rear, left and right, in full-HD quality) to a single image from the bird's-eye perspective. A special feature of the system is – depending on the driving situation – self-adjusting image sections at manoeuvring speed (≤ 40 km/h), when the turn indicator is set (lane change) and when reversing.

* For MAN TGX and TGS

**MAN Individual package

SAFETY FIRST, EVERY TIME.

MAN has the right cab for every need – and maximum safety, comfort and ergonomics travel with you wherever you go. Our cabs are designed for fatigue-free, focussed driving, relaxing breaks and maximum passenger protection. All of the cabs offer optimum safety thanks to a range of features, including the mirror system comprising main and wide-angle mirror, large kerb mirror and front mirror. Or the innovative MAN OptiView digital mirror-replacement system which provides the driver with the optimal overview of the traffic situation. A heated wind-screen ensures an unobstructed view even at the coldest times of the year.

Aerodynamically optimised sun visor for MAN GX and GM cabs

The design sun visor in dark grey adds a touch of class to the front of the GX and GM cabs. It prevents the driver from being dazzled when the sun is at a steep angle. The design has been optimised for aerodynamics, resulting in better airflow around the A-pillar at the roof and preventing separation of the air stream which is unfavourable for fuel consumption. This improvement of the drag coefficient (cd value) reduces fuel consumption.

MAN OptiView.

With the innovative MAN OptiView digital mirror-replacement system, enhanced safety takes to the road. This is not only because MAN does away with mirror arms and depicts the statutorily required fields of vision, but also because in critical driving situations such as manoeuvring, turning off and changing lanes, the extended views provide the driver with the optimal overview of the traffic situation.

MAN OptiView does far more than conventional mirror systems. Besides the statutorily required fields of vision, the digital mirror-replacement system also shows views specifically adapted for various driving situations (e.g. turning off, manoeuvring, driving on motorways). The functional principle and display concept of MAN OptiView are thus optimally matched to natural human perception, enabling the driver to visually grasp the vehicle surroundings and traffic activity quickly, evaluate them reliably and deal with them safely.

Cab	W x L (mm)	Sleeping facilities	Available for	Segment	Benefits at a glance
Cab GX: The maximum one (wide, long, extra height)	2,440 x 2,280	2	TGX	Long-haul transport	<ul style="list-style-type: none"> ■ One of the most capacious in Europe ■ Even more standing height: 2,100 mm ■ 2 comfortable beds
Cab GM: The generous one (wide, long, medium height)	2,440 x 2,280	2	TGX	Long-haul transport	<ul style="list-style-type: none"> ■ Full standing height ■ Spacious interior ■ 2nd bed possible
Cab GN: The roomy one (wide, long, standard height)	2,440 x 2,280	1	TGX	Special uses in local transport (e.g. building materials, wood)	<ul style="list-style-type: none"> ■ Compact size ■ Convenient through access ■ Comfortable bed as standard
Cab TM: The comfy one (narrow, long, medium height)	2,240 x 2,280	2	TGS, TGM, TGL	Heavy-load special uses in national long-haul transport	<ul style="list-style-type: none"> ■ 2 sleeping spaces ■ Capacious exterior storage compartment ■ Expanded standing space in through access
Cab TN: The flexible one (narrow, long, standard height)	2,240 x 2,280	1	TGS, TGM, TGL	Local and distribution transport, off-road transport, municipal services	<ul style="list-style-type: none"> ■ 1 sleeping space ■ Capacious exterior storage compartment ■ Expanded standing space in through access

Cab CC: The compact one (narrow, short, standard height)	2,240 x 1,620	–	TGM, TGL	Local and distribution transport, off-road transport, municipal services	<ul style="list-style-type: none"> ■ Comfortable height ■ 3rd seat possible ■ Additional storage spaces in midsection
Cab DN: The crew cab	2,240 x 2,790	–	TGM, TGL	Construction transport, municipal services	<ul style="list-style-type: none"> ■ 6 (optionally 7) seats ■ Comfortable height

ERGONOMICS START WITH THE VERY FIRST STEP.

The ergonomic entry design of the MAN Trucks ensures a pleasant start to the day. As the entrance is positioned in the middle of the door area, the driver can get into the vehicle in an upright position. The access ladder is designed as a stair so you have all steps in view. On entering the vehicle, the design ensures extra comfort, and it offers better safety, too. Thanks to entry lighting, the steps and surroundings are visible at any time of day and in any weather conditions as soon as you open the door. For all this, we didn't forget the little things either: an entrance optimised especially for off-road work and that features steps with a non-slip surface and a lattice structure, washable interior door panelling and a compressed air supply. This way sand, mud and gravel can quickly be shown back out the door. In addition to ensuring your truck makes a positive impression visually, breaks feel all that much better, too.

That said, we developed the MAN EasyControl system specifically to help you avoid getting in and out when you don't have to. Within the driver-side door there are four controls that can be easily accessed from outside the vehicle. Depending on your configuration, they come preprogrammed with the key functions or can even be implemented according to individual needs.

Once in the cab, you have a variety of driver's seats to choose from, each ready to welcome your particular build. There is a larger range of backrest adjustment options for drivers of all sizes. The passenger seat as well features highly ergonomic design and its own range of individual adjustment possibilities. The Vario seat is especially space-saving: when it's not needed, thanks to its Cinema function, it can simply be folded away. With the TGX, the whole seat can even be rotated 90° to enjoy maximum legroom during breaks.

Even the steering wheel has been given greater flexibility: for the resting position, the steering wheel can be tilted forward to a horizontal position by the driver, and in action as well, it can be given as steep an angle as that of an average passenger car. The result is a workplace that bends over not only backwards, but forwards and sideways as well, to suit. So the driver doesn't have to.

- 1 The lowest step, which is prone to damage when driving off-road, is now movable. Its mounting brackets are made from flexible plastic, meaning that they can change shape if they come into contact with the ground and return to their original shape again afterwards.
- 2 With its significantly extended adjustment range, the steering wheel offers drivers of different heights and statures an individual steering position suited to their physical characteristics.

WITH MAN YOU CAN TAKE A LOAD OFF.

Everything has to come to rest at some point. A good atmosphere. A cosy environment. In the sleeping area of the MAN trucks that's exactly what you'll find. In the extended cab models, a multizone cold-foam mattress and a slatted frame ensure comfort for well-deserved shut-eye and peaceful dreams. Personal items have their spot too in the many, customisable stowage compartments.

The bed is so comfy, you might want to stay just where you are. And you can, too, since all important functions can be operated and monitored right from the remote control. Lights, locks, heating, windows – all a simple push of a button away. Just like the radio, music, the perimeter camera and important data on the battery's current status or driving times. The infotainment system can also be conveniently operated via the MAN Driver app. Breaks and sleeping times can therefore be used optimally so that you're well rested and ready to take on upcoming challenges.

In our cabs an auxiliary water heater provides pleasant temperature and air condition. For the MAN GX, GM, GN, TM and TN cabs for the TGS electrical auxiliary air-conditioning system (as an option) is ready for use. The electric air conditioner works without a cold reservoir, which would have to be charged during vehicle operation, and is thus ready for use at any time. Even in summer it can keep things refreshingly cool for up to 11 hours.

While the truck is on the road, MAN Climatronic maintains the chosen temperature fully automatically. Comfortable temperature zones in the cab are assured as well, as the foot area and the head area are controlled separately. Perfect for keeping your head cool but your toes toasty. Noise and lights are kindly asked to stay away, however. To create the perfect feel-good environment, the entire interior can be tailored to suit you down to the ground. From the colour scheme (Desert Beige or Moon Grey) to the storage space in the cab and even the interior lighting, everything can be customised to your needs – while maintaining a clear focus on the functionality which will never let you down.

Lion emblem on partial leather seats and curtains

With the expressive lion emblem on the partial leather seats and the practical curtains, stays in the cab are even more pleasant. The curtain fabric is hard-wearing and is in the same colour for both interior colour schemes. The cross-cab curtain is designed as a single piece. The bunk area can now be made even darker.

- 1 Perfect for independent types: on-board coolbox/fridge
- 2 Lion emblem and curtains

TOP-CLASS DRIVER'S CAB.

The traffic situation is becoming ever more demanding and complex. And when off-road, you're always facing new challenges that call for a driver's full concentration. It is all the more important to us then to make the cockpit as driver-friendly and organised as possible. Displays and controls are separated from one another spatially. Reading distances and reachability are thus ergonomically optimised: data is set at a farther distance, making it easier to grasp, functions are colour-coded, and buttons and switches are within easy reach. The focus is clearly set on the most important areas. The driver's view can easily go between the road and the instruments, without fear of distraction. Just another MAN contribution to making drivers' lives less complicated and less tiring.

All of the displays and controls throughout the vehicle follow a single concept. Symbols, colours, usage, alert and warning sounds as well as design are consistent throughout the cockpit. The quick-selection keys are individually programmable and accelerate workflows. Not to mention notices can be played in any of 30 different languages.

For voice command operation, a choice of six languages is offered. All of it intuitive to use. After all, the controls – and especially the cutting-edge digital components – were developed by drivers for drivers. This way the driver can see to the truly important things: the cargo and the transport, whatever the terrain.

DNR selection for MAN TipMatic® on stalk switch

Operation of the gearbox using the right control stalk is a completely new development. Both driving mode and driving program are selected by means of the stalk switch. Controls located in easy reach near the steering wheel and electric parking brake make for certainty in operation.

The parking brake can optionally be engaged by means of an electric switch, which is located on the right-hand side of the instrument panel next to the main display. Under certain circumstances, both actuation (engagement) of the parking brake when parking the vehicle as well as its release when moving off can be carried out automatically.

DRIVING SMART.

With navigation, radio (from standard to digital), video, telephone and more tailored to trucks, the infotainment system of the MAN Trucks is a communication and multimedia hub. It is available in five different variants, from entry-level to Navigation Professional. The 7-inch or 12.3-inch display – both with brilliant HD resolution – makes for great viewing. Direct access buttons and a USB-C input connection are part of the standard fittings, and from Advanced level on up to two smartphones can be paired. The media system Medium 7” is an entry-level media system version for vehicles that are subject to the new statutory provisions on equipment with a Reversing Motion System.

The infotainment system can be operated either via a classic control system with buttons or via MAN Smart-Select (can be combined from version Advanced 7-inch). Throughout, familiar usage meets innovative comfort. The result is one you can see and feel, too, as high-quality surfaces make every journey with an MAN Truck tangibly special.

Reversing Motion System

Overview to the rear when manoeuvring – ex-works! When reversing a solo vehicle, the camera image of the camera installed ex-works in the rear area supports the driver. People or objects behind the vehicle can be detected, trailers or semitrailers are in full view when connecting or hitching up.

The image from the camera is automatically shown on the MAN media system display when reverse gear is engaged and the vehicle rolls backwards. A button on the instrument panel with a camera symbol enables manual activation of the system.

- 1 Infotainment system with 12-inch display and MAN SmartSelect
- 2 Right: Camera image of the Reversing Motion System when hitching up
Left: Camera image of the front camera with MAN OptiView

IMPROVED AERODYNAMICS.

The better the headwind flows around a vehicle, the less fuel is required for driving. With the TGX, in line with the design of the MAN Trucks, gap widths between the cab and semitrailer are therefore reduced and the formation of turbulence is suppressed for optimum aerodynamics. The reversible extensions on the side flaps and roof spoiler reduce the free space between the cab and the semitrailer. This achieves a particularly effective aerodynamic airflow around the entire vehicle – even in cross winds. The door gap closing element is a highly flexible plastic element attached to the door extensions, which closes the vertical gap between the front edge of the door extension and the bumper. This further optimises the aerodynamic flow around this area.

The aerodynamically optimised A-pillar cladding for TGX and TGS has a specially shaped attachment made of flexible plastic, which improves airflow around the A-pillar and thus – due to lower eddies – reduces drag. Vehicles with the MAN OptiView mirror replacement system benefit to a greater extent from the new aerodynamically optimised A-pillar cladding and the calm airflow in this area.

POWER THAT GOES THE DISTANCE.

If you want to get to the top, you need drive and efficiently deployed strength. For the MAN trucks, we have a full four on offer: the MAN D38, our engine for heavy-duty tasks for the MAN TGX, the MAN D26, the D15 and the D08. Each one is a high performer and brings efficiency and trusted MAN reliability to make your new truck a strong and cost-transparent member of your business for a long time to come. With every stage of development, a high level of engineering skill reduces fuel consumption and increases performance. Recent example: the MAN D26 in Euro VIe. Brings 10 hp and 50 Nm more to the road and still consumes up to 3% less fuel.

So that you can get the most out of our high-performance engines at all times, we have a variety of digital tools ready and waiting. The digital service Perform assists drivers in optimising the economy of their driving styles. Perform evaluates all the relevant vehicle data with respect to the economic efficiency of the driving style. The service provides important vehicle data about utilisation of cruise control or the service brake, for example.

Efficiency is always what comes first when it comes to MAN engines. You can count on it. Finally, there was only one component left for us to improve: the driver. And we took that on, too: first via efficiency data displays and assistance systems like the GPS-based speed control system MAN EfficientCruise® with PredictiveDrive. The new function of the MAN EfficientCruise® GPS cruise control no longer drives blindly and stubbornly uphill, but weighs up possible speed and gearshift strategies against each other like a strategist and ultimately selects the one with the most economical fuel consumption. Then we added tailored driver training using the data from your specific MAN truck, continuously digitally recorded and ready for evaluation. Together it's the ideal basis for the perfect interplay of human and MAN.

New generation of hypoid axles*

The new generation of hypoid axles enables a driveline configuration that is optimally matched to the respective application: Lighter and more efficient. As single axle or tandem-axle assembly.

Engines Euro VI

	Type	Capacity	Rated output	Max. torque
D0834	R4	4.6 l	118 kW (160 hp)	600 Nm
	R4	4.6 l	140 kW (190 hp)	750 Nm
	R4	4.6 l	162 kW (220 hp)	850 Nm
D0836	R6	6.9 l	184 kW (250 hp)	1 050 Nm
	R6	6.9 l	213 kW (290 hp)	1 150 Nm
	R6	6.9 l	235 kW (320 hp)	1 250 Nm
D1556	R6	9.0 l	243 kW (330 hp)	1 600 Nm
	R6	9.0 l	265 kW (360 hp)	1 700 Nm
	R6	9.0 l	294 kW (400 hp)	1 800 Nm
D2676	R6	12.4 l	324 kW (440 hp)	2 250 Nm
	R6	12.4 l	353 kW (480 hp)	2 450 Nm
	R6	12.4 l	382 kW (520 hp)	2 650 Nm
D3876	R6	15.2 l	397 kW (540 hp)	2 700 Nm
	R6	15.2 l	427 kW (580 hp)	2 900 Nm
	R6	15.2 l	471 kW (640 hp)	3 000 Nm

*Available for MAN TGX und TGS. Also for MAN TGM vehicles with 13 t rear axle.

THE MAN DRIVETRAIN.

MAN HydroDrive® - more traction at the touch of a button

You never know what to expect on the job, so it's best to be prepared for anything – like slippery terrain, mud and gravel. MAN was the first manufacturer of utility vehicles to launch the engageable hydrostatic front-wheel drive HydroDrive onto the market and has extensive experience with this system. The MAN HydroDrive® easily copes with any situation where traction is crucial – even scenarios where a truck with rear-wheel drive only would have to give up and go home. The system is available with the semi-automatic MAN TipMatic® transmission or with a manual transmission, so the choice is always yours. MAN also makes downhill gradients safer by transferring the engine braking torque to the front axle (known as “support”). What is more, the combination of MAN HydroDrive® with a PriTarder extends the life of the service brake. This enhances safety and improves directional stability on unpaved surfaces, even when travelling downhill – the perfect solution for your driving jobs. You only need to press a button to access considerably better traction. This allows your MAN to tackle a much wider range of jobs. In addition to using less fuel than a conventional all-wheel drive, it reduces the weight by as much as 400 kg. Even if you do almost all of your driving on the road, shifting logic and braking action boost mobility and safety, especially for unladen trips on slippery surfaces.

All-wheel drive for everyone

Wherever maximum traction is needed, that's where MAN vehicles with permanent or selectable all-wheel drive go into action. They're available as 4x4, 6x6, 8x6 and 8x8 versions. The power is distributed by two-speed MAN transfer cases with on-road and off-road ratios. Planetary axles with greater ground clearance, differential locks, drum brakes and stabilisers are also fitted in the all-wheel drive vehicles. ESP and assistance systems are also possible with permanent all-wheel drive. A feature on the MAN TGM is the optional electronic transfer case and lock management. This helps the driver to operate the vehicle on- and off-road as the conditions in terms of traction require and takes some of the load off the power train. In the MAN TGX and MAN TGS too the engaging and disengaging of differential locks is electronically monitored.

Continuous braking

EVBec®: As a further development of the MAN EVB engine brake (Exhaust Valve Brake), the EVBec® has many advantages, e.g. an improved braking effect by controlling the exhaust gas back pressure, significantly increased brake output especially in the lower engine speed range, overheating protection during long braking operations and constant brake output whether the engine speed is rising or falling. Three brake output stages are available.

The retarder is a hydrodynamic continuous brake integrated into the gearbox housing. Its brake output depends on the driving speed, with the best performance achieved in the medium to high speed range. The brake output level does not depend on gearshifts or clutch operation. This increases driving safety during long descents by relieving the load on the service brake system.

With the innovative MAN PriTarder®, the MAN TGS comes with a highly efficient primary brake system that is one of a kind. The TurboEVBec® engine brake with PriTarder in the MAN D26 engine produces an enormous brake output of up to 625 kW even at a moderate engine speed, enabling safe and wear-free downhill driving.

The MAN TurboEVBec® high-performance engine brake in Connection on the MAN D15 engine enables a stepless wise regulation of the engine braking power up to maximum 350 kW (in conjunction with the power level 400 hp, otherwise max. 330 kW). The MAN PriTarder® really demonstrates its strengths in distribution or traction: the completely maintenance-free system increases the payload by up to 64 kg while doubling the lining life of the service brake. The MAN PriTarder® is integrated into the MAN BrakeMatic® electronic continuous brake management and is easy to operate via the stalk switch.

MAN TipMatic®

MAN has taken efficiency to the next level with the MAN TipMatic®. This system enables the vehicle to automatically recognise the load and incline conditions and optimise the gear-changing strategy to match. Whether the truck is unladen or fully loaded, MAN TipMatic® automatically selects the ideal gear for pulling away. Moreover, the wide gear spread and software which recognises inclines guarantee outstanding performance when moving off. “SmartShifting” is a further evolution of the well-known “SpeedShifting” and minimises traction interruptions when changing gear while travelling uphill, for instance.

“Idle Speed Driving” enables comfortable moving off and driving at idling speed. This feature allows the driver to manoeuvre the truck with precision and sensitivity or “just go with the flow” in slow-moving traffic on the motorway. And should the truck get stuck in snow or in wet, loose ground, the rocking-free function makes it easier to drive off, especially due to the ability of the clutch to rapidly open and closing. In addition, MAN TipMatic® also contains pre-programmed driving settings for various driving situations, such as the fuel-saving Efficiency program, Manoeuvre mode, programs for heavy loads and Performance mode for a more agile driving style. This ensures that your truck will always perform to the max, anytime, anywhere.

MAN TipMatic® with Idle Speed Driving, Speed Shifting¹⁾ and EfficientRoll¹⁾ functions is also available for MAN TGL and TGM. These moving-off and gearshift strategies improve driving comfort and reduce fuel consumption.

1) Speed Shifting and EfficientRoll only available with 12-speed version

THE MAN TGX AND TGS KNOW EVERY HILL – AND THE BEST GEAR TO MATCH.

Complex chess game on uphill gradients

The new PredictiveDrive function of the MAN EfficientCruise® GPS cruise control no longer drives blindly and stubbornly uphill, but weighs up possible speed and gearshift strategies against each other like a strategist and ultimately selects the one with the most economical fuel consumption.

By taking into account the selected navigation route, or without navigation the most likely, the cruise control function MAN EfficientCruise® calculates the route with its uphill and downhill gradients up to three kilometres ahead with the aid of three-dimensional map data. The new PredictiveDrive supplements the effect of MAN EfficientCruise®, especially on uphill and downhill gradients. The PredictiveDrive system continuously analyses potential driving and gearshift strategies in these route sections and selects the most efficient one depending on the situation. This makes it possible to prevent unnecessary traction interruptions due to gear hunting and frequent gearshifts. Depending on the topographical conditions, the available torque is enabled or reduced as part of the dynamic torque adjustment. In addition, the characteristics of the selected driving program are also taken into account.

What is new is that a reduced form of dynamic torque adjustment is also used in the Efficiency driving program – with a correspondingly positive effect on the fuel consumption of the entire fleet. Previously, the positive effect of dynamic torque adjustment was reserved for the Efficiency Plus driving program. The aim of the PredictiveDrive function is generally to make the best possible use of the predicted topographical changes on the route in order to be as fuel-efficient as possible by actively varying the speed, gear and available engine torque. With the goal of implementing this at almost average speed neutrality.

For example, it may be advantageous:

- to drive into an uphill gradient with momentum and shift down early,
- to use the full engine torque when on the gradient,
- and to reduce the engine torque again at the end of the incline.

MAN EfficientCruise® and PredictiveDrive are already active from low speeds (approx. 30 km/h). The system works both when driving freely and in cruise control mode. The anticipatory system reactions on uphill gradients ensure significantly better drivability and thus also increase driver acceptance of the dynamic torque adjustment.

Within a tolerance range, adaptation of the vehicle speed to the topography can be higher or lower than the desired speed set by the driver. This maximum deviation from the desired speed can be set in four ECO levels. In this way, the driver is easily able to adjust the potential fuel saving to the road surface, visibility and traffic conditions.

THE RUNNING GEAR.

Axle and suspension systems

Whether planetary or hypoid axle – both axle systems are available with various transmissions and parabolic or air suspension. The planetary axle is also available with trapezoidal suspension. Parabolic suspension makes driving the loaded or the empty vehicle very comfortable and is beaten into second place only by air suspension. The available weight-optimised hypoid axle results in a weight saving of 180 kg compared to the normal hypoid axle and 280 kg for the planetary axle. The ground clearance is similar to a planetary axle. Vehicles with leaf springs are available with simple tandem hypoid axles in normal and medium-high design height. Vehicles with air suspension are available in normal design.

Construction air suspension

One of MAN's specialities is construction air suspension on the rear planetary axles – available for construction vehicles of medium height and all-wheel drive height. With lifting and lowering equipment fitted as standard, it has a load-carrying capacity of up to 13 t per rear axle. This is ideal for the tough work on building sites (overload reserve) and on difficult terrain. Advantages: a smooth ride in any load condition, thanks to the electronic levelling system **VASC** easier on the vehicle, the body, the load and the road. For use with road finishers there are internal stabilisers.

- 1 Planetary axle
- 2 Hypoid axle
- 3 Light tandem hypoid axle
- 4 Construction air suspension

New air suspension control

The air sprung rear axle is now standard in long-haul transport. However, the possibilities and advantages of air suspension are also increasingly being used in many other application segments. The new air suspension control with its improved and extended range of functions takes this trend into account. The new electronically controlled air suspension VASC (Vehicle Air Suspension Control) allows the vehicle frame to be raised and lowered to suit different deployment scenarios. The control unit for the electronically controlled air suspension (VASC) is installed in a separate holder next to the driver's seat and allows the driver to adjust the height of the vehicle frame quickly and precisely – for example, to adjust the cargo space floor and the loading ramp to the same level. An extended control unit enables the VASC to be operated via the multifunction steering wheel and via a menu in the display of the instrumentation.

System improvements:

- New functions, for example a 2nd rear axle relievable, a manual and automatic suppression of VASC (Vehicle Air Suspension Control) level control, and a selection option of 2nd lowered driving height for compensation of tyre rebound on empty runs.
- Shorter lifting and lowering times (up to 50%)
- Remote control with new ergonomic operating design
- Control via multifunction steering wheel and on-board menu
- Control of the air suspension of the trailer/semitrailer via remote control or multifunction steering wheel

Vehicle heights

MAN delivers vehicles in normal, medium and all-wheel drive heights, corresponding to increased requirements in terms of ground clearance and angle of approach.

Steel bumper

The strikingly designed three-part steel bumper gives the front of the vehicle muscular and rugged appearance. The headlights with their two-part protective guards fit harmoniously into the overall look. Suited to the tough conditions experienced in the traction segment, the steel bumper is very rugged and has a correspondingly extremely long service life.

MAN EasyStart

Problems with hill starts are a thing of the past thanks to MAN EasyStart. The MAN EasyStart hill-holding brake automatically holds the vehicle using the service brake until the engine torque reaches the level to move off. The system is now enabled by default and is therefore always available.

Tyres with various profiles ex works

You receive your vehicle from the works fitted with tyres in the profile of your choice. You can also select your brand of tyre from various well-known manufacturers.

Modifications to cab and chassis

Special axle configurations and modifications to the driver's cab can be individually retrofitted for specific customers or branches.

1

Steering brake

Take the sharpest bends. With the steering brake function activated, the rear wheels on the inside of the bend are braked depending on how far the steering wheel is turned. This considerably decreases the turning circle. The steering brake, which is available for the 6x4 and 8x4 vehicles with tandem axles, is activated by pressing a button and functions at speeds of up to 30 km/h.

Hill-climbing brake

The hill-climbing brake for MAN all-wheel vehicles acts pneumatically on all wheels, holding the truck reliably when stopping and moving off, and is controlled by the driver on hills. As opposed to systems that use spring reservoirs to brake only the rear axle, a MAN all-wheel truck equipped with the hill-climbing brake can't slip.

2

- 1 Functional principle steering brake
- 2 Variable axle load ratio

Variable axle load ratio

With variable axle load ratio, the drive axle always has optimal traction, regardless of loading height. The drive axle is fully loaded until it reaches the prescribed axle load. Afterwards, the additional load is absorbed by the auxiliary axle – without lowering the drive axle load. The axle load is therefore not fixed but rather distributed variably between the rear axles, so that the drive axle has sufficient traction in any loading condition and the legally prescribed minimum axle load is not fallen short of in any loading condition. The system does not have to be switched on separately; it is always active.

Second rear axle relievable (moving-off aid with speed limitation)

The pressure levels of two driven rear axles can be set by means of a button so that the rearmost drive axle is relieved. This primarily improves steerability and reduces wear. The interaxle differential lock of the rear drive axles must be activated beforehand so that the drive torque remains on the loaded axle and is not transferred to the 2nd relieved axle. Axle load relief remains active up to a speed of approx. 30 km/h or until the button is pressed again.

10-tonne front axle¹

Depending on country-specific requirements, particularly powerful body concepts that require a bearing load of 10 tonnes on the front axle can be implemented.

MAN ComfortSteering²

MAN ComfortSteering helps the driver to steer and forms the basis of other assistance systems such as Lane Return Assist (LRA). Because the steering forces are adapted to the road speed, the strain is taken off the driver and there is ease of movement when manoeuvring and ability to stay in a lane at high speed.

1) Availability depending on the wheel configuration

2) Availability depending on the vehicle type

MORE TRACTION.

New electronic brake system EBS

The electronic brake system EBS combines the basic function of the electro-pneumatic brake with the extended functions of antilock braking system (ABS) and anti-slip control (ASR). With the aid of EBS, driving and braking procedures can be optimised in many different ways. It thus makes an important contribution to enhancing driving safety, driving comfort and cost-effectiveness. In the brake system of the MAN Truck Generation, the electronic brake system EBS has been further developed and its range of functions expanded with new functions. Active wheel speed sensors with their own power supply and evaluation electronics now replace the previous passive sensors. Active sensors enable extremely accurate and fast speed measurement from just 0.1 km/h. Off-road moving-off behaviour with tandem-axle units is improved with the use of sensors on the second axle.

Also new are halt brake braking function with preparation for reversing restriction and rollback detection, MAN EasyStart Offroad hill holder and the hill-climbing brake in conjunction with manual gearbox. It is now also possible to combine the systems in one vehicle.

Electronic anti-slip control (ASR)

In future, the new electronic anti-slip control will be able to prevent the spinning of driven wheels on all vehicles – including on the driven front axles of vehicles with MAN HydroDrive®*.

The anti-slip control (ASR) prevents the drive wheels from spinning when moving off or accelerating. This improves traction, particularly on slippery surfaces such as ice, snow, loose chippings or wet cobbles, and ensures stable driving. The further development of the electronic brake system EBS (use of active wheel speed sensors) means that for example vehicles with MAN HydroDrive® can also be combined with anti-slip control (ASR). This improves traction in this type of drive when a front wheel spins more on one side.

MAN works tipper range

From the MAN factory gate directly and without detours to the construction site – that is the MAN works tipper range. The two-, three- and four-axle chassis with tipper body can be used directly ex-works. This means that everything comes from a single source.

All MAN works tippers are designed as complete vehicles by the MAN engineering departments, have passed the relevant strength calculations and have been validated by the standard MAN driving test processes. The interaction between chassis and body is therefore particularly efficient and reliable.

*For MAN TGX and TGS.

BUILDING ON RELIABLE FOUNDATIONS.

The compact powerhouse in the van segment. A wide range of applications mean building companies using MAN TGE vehicles really hit the nail on the head.

High load outlay, loading work within a small space – strong performances are needed in every weight class at the construction site. One of our top performers is the MAN TGE; it helps you to achieve great things, even in smaller construction projects.

This little powerhouse can be delivered ex works configured for a tipper, with a rear window, reinforced suspension, damping system and stabilisation as well as with a trailer coupling for up to 3.5 tonne towing capacity.

We can also equip the MAN TGE with a 3-sided tipper or a robust platform body by request. The vehicle can even come with the required equipment for a roll-off skip loader. For urban use, there is an ex-works platform and tipper solution available based on the MAN eTGE.

The powerful PTO and an additional oil cooler, which can be delivered ex works, allow for a continuously high performance of up to 40 kW. Thanks to the 4x4 all-wheel drive, uneven terrain is no longer an issue either.

THE SAFER THE BETTER.

You need a team you can rely on. That's why the MAN TGE doesn't come on its own, but with a variety of innovative safety systems that help you focus even more on your work within the respective system boundaries. At the same time, they help avoid damage to the vehicle and therefore costs for you.

P **Park steering assist¹⁾**

When activated, park steering assist takes over the steering of the vehicle during parking, slipping the MAN TGE smoothly and accurately into narrow spots. The driver continues to operate the accelerator and the brakes manually, remaining in full control of the vehicle. The system makes parking easier than ever in the MAN TGE and prevents damage from parking mistakes.

Emergency brake assist (EBA) as series-standard

If the MAN TGE is approaching an obstacle and the driver doesn't react, the series-standard emergency braking system warns the driver and then activates the brakes in the event of an emergency. In combination with the automatic transmission, the system automatically brings the vehicle to a complete stop to prevent a collision²⁾.

Park out assist¹⁾

A part of lane change assist, park out assist helps the driver to back out of a parking place and brakes the MAN TGE automatically if there is a risk of collision with traffic coming from either side.

¹ Optional extra for an additional fee.

² Up to 30 km/h.

Active lane assist¹⁾

If the vehicle unintentionally strays from the lane, active lane assist automatically compensates and steers the vehicle back into the lane. The system automatically activates at speeds over 65 km/h and functions reliably even in poor weather conditions or with low visibility.

Lateral protection assist¹⁾

Sixteen ultrasonic sensors monitor the distance of objects on either side of the vehicle and in an emergency warn the driver of objects close to the MAN TGE. A convenient display provides a 360° view all around the vehicle from the driver's seat, indicating potential collision risks when changing lanes. An acoustic signal also warns the driver of collision risks.

Trailer assist¹⁾

Activated as needed: when reversing with a trailer, the MAN TGE automatically follows a previously set turning angle. The driver only operates the accelerator and the brakes, while the vehicle steers automatically.

Adaptive cruise control (ACC)¹⁾

Convenient and practical adaptive cruise control with a speed limiter that in combination with an automatic transmission can brake the vehicle down to a full stop.

DRIVE TYPES AND ENGINES.

Specially developed for the tough demands of utility vehicle use, these engines combine a long service life with impressive power and low fuel consumption. No matter what transmission or drive type you choose, they deliver outstanding performance, efficiency and reliability under extreme driving conditions.

Diesel engines (Light Duty, Euro 6d)¹:

2.0 l (75 kW, 300 Nm), Turbo:
Front-wheel drive

2.0 l (103 kW, 360 Nm), Turbo:
Front- and all-wheel drive 4x4

2.0 l (130 kW, 410 Nm), BiTurbo:
Front- and all-wheel drive 4x4

Diesel engines (Heavy Duty, Euro 6e)¹:

2.0 l (103 kW, 360 Nm), BiTurbo:
Front¹-, rear- and all-wheel drive 4x4¹

2.0 l (120 kW, 410 Nm), BiTurbo:
Front¹-, rear- and all-wheel drive 4x4¹

Elektric engine¹:

Elektric (100 kW, 290 Nm), synchronous engine:
Front-wheel drive

Energy consumption: 29.1 kWh/100 km
CO₂ emission: 0 g/km

¹ Not available in combination with twin tyres

Crew cab Height: 2,321–2,352 mm			

RELIABILITY IN DETAIL.

Our reliability rests on many components. The first is our continuously growing LED range for the lighting systems of the vehicle. Another is our dedication to the little things. For instance, when it comes to the electricity supply of the MAN Trucks we pride ourselves on laying not one wire more than your configuration needs. The wires themselves are now protected by even more flexible and elastic materials, and the number of joints has been cut. We also reduced the wire thickness overall, which in turn means less weight and more available load capacity.

The modular wiring concept offers additional advantages by allowing customer requests to be easily incorporated and enabling quick repairs thanks to prefab sets. Together, the result is shorter downtimes and a vehicle electrical system with higher performance overall.

24V battery management system for trucks.

Empty batteries and stranded vehicles due to excessive use of electrical devices during rest periods are a thing of the past with the new MAN battery management. The system ensures that the vehicle engine can be started by automatically switching off less important consumers.

Cyber security

The networking of electronic systems and the associated data availability and use are both a curse and a blessing. On the one hand, this enables new helpful functions and applications – on the other hand, it offers potential targets for hackers. MAN consistently safeguards all vehicle systems against misuse.

SUPPORT NON-STOP.

Only a truck that runs is a good truck. Unplanned downtime and the associated loss of time and earnings are something we'd all like to do away with for good. The MAN Truck Generation has got your back there too. Right from day one, it brings the ultimate quality synonymous with MAN to its work. So much so that it's hard to get it to stop. If you need us, however, we're ready and waiting. When you're at a standstill, we will get you back on track as quickly as possible. We will move heaven and earth to keep you mobile. In short, where there's a MAN employee, there's a way.

When it comes to financing, too, you can rely on MAN: MAN Financial Services supports your needs and makes sure you stay mobile. You can even cover bottlenecks and react flexibly to higher demand thanks to truck leasing from MAN Rental.

With our clever solutions, you can make your business noticeably easier and more transparent. We've got it covered, so that your head stays clear for the road in front.

At a glance:

■ MAN Mobile24

Via the MAN Mobile24 mobility service, you can reach us round the clock europe-wide. The service has been expanded with additional solutions, so that our customers are always on the safe side for every kilometre. As well as the guarantee that the transport business can continue to run smoothly in the event of a breakdown.

■ Uptime guarantee

The MAN uptime guarantee keeps you moving. We are never far away in the event of a breakdown and, even if downtime or repairs are required, we will get you back on the road in no time.

■ Service contracts

We help you save time, money and stress. MAN takes care of everything as required, from servicing and invoice management to answering questions relating to guarantees and goodwill.

■ MAN Genuine Parts

With compliance with strict quality standards guaranteed, MAN Genuine Parts are the ideal match for your vehicle. It's the only way for your MAN vehicle to be driven safely, efficiently and with minimum wear.

■ Accessories and retro-fit solutions

Easily tailor your MAN to your needs with our high-quality accessories. Subsequently and simply. With products exactly matching your MAN model. And matching you.

SERVICE AS YOU LIKE IT – PERSONAL AND DIGITAL.

Could your company also benefit from the increasing digitalisation taking place in logistics? We are convinced it can. That's why we would like to give you a brief insight into how you can better master the **most pressing challenges of your industry with smart digital solutions.**

Above all, the high cost and time pressure make the working environment in the logistics industry particularly challenging. Every vehicle in your fleet must be operated as economically as possible. This requires economical driving behaviour as well as effective and repair management. With an internet-enabled truck with Over-the-Air Upgrades, an overview of all the key data about the vehicle and its performance appears directly on your desktop, and many other useful features of our digital services give you the freedom to take care of business.

Your benefits:

- **more efficiency,**
- **simplified work processes, with maintenance outsourced to your MAN Service Centre or by keeping drivers and fleet managers digitally connected**
- **lower costs.**

The best part: it's already a reality.

With MAN DigitalServices, you can begin straightaway.

While transport is – and will always be – analogue, fleet management is becoming digitalised. MAN DigitalServices helps you optimise business tasks, bring fuel and admin costs down, plan and manage servicing tasks from the truck, manage time and provide continuous training to drivers.

We would like to give you the opportunity to try out this comprehensive package for three months for free! Our trial offer includes the following paid-for digital services: Geo, Perform, Compliant, MAN ServiceCare M and Timed. MAN ServiceCare S and the MAN Driver app are already free and are not part of this offer.

Take advantage of:

- **efficient fleet management with digital services that make your job significantly easier**
- **our new cost- and risk-free offer: your free trial will automatically end after three months, with no further obligation.**

The trial offer* is valid for all the vehicles** in your fleet for your registered trial period. Get started now: with just a few clicks, you can try all the benefits of MAN DigitalServices for your whole fleet. We are sure that you will be impressed.

www.man.eu/marketplace

The digital services listed below help you manage your fleet economically and efficiently:

- **Vehicle tracking**
- **Maintenance and repair management**
- **Tachograph and time management**
- **Economical driving**
- **Driver assistance**
- **Over-the-air upgrades**

The latest information on MAN DigitalServices can be found on our website: www.digital.man

* Valid for all customers who do not currently pay for MAN DigitalServices.

** Depending on technical availability.

EASIER WORKDAYS.

MAN ServiceCare

Regular maintenance is a must if you want to reduce unscheduled downtime and repair costs for your fleet. Our free MAN ServiceCare S is there to help – we'll be very happy to take care of your maintenance and repair needs. The service works using vehicle and maintenance data relayed to MAN ServiceCare over the Internet. Your MAN Service Centre uses this to proactively arrange maintenance appointments and combine your maintenance tasks. After all, you've got enough to do already. What's more, your nearest MAN Service Centre can use remote vehicle diagnostics to view targeted vehicle data and give you a more personalised service if you break down. MAN ServiceCare M gives you all the benefits of MAN ServiceCare S but you also get extra tools for even more personalised maintenance and repair management across your whole fleet. We are continually upgrading MAN ServiceCare – with pre-emptive tools that increase the uptime of your vehicles in a more straightforward and comprehensive way.

MAN Driver App

The MAN Driver app ensures that drivers always have important information about their MAN to hand. Not only does our smartphone-based digital assistant make life on the road easier but it also speaks 26 languages, which means that drivers from lots of different countries can use it. Our smart, user-friendly and efficient MAN Driver app helps MAN drivers on every trip, providing important information and offering a range of features to make their lives easier. For example, if they break down, they just tap on the app and connect to the MAN Mobile24 emergency service. Drivers can also notify fleet managers about any damage and send any documentation quickly and easily through the app. The MAN Driver app is a constant companion – whether you need to carry out a vehicle check before departure, look for a parking place online or check driving and rest times.

The MAN Driver app is free of charge and connects drivers, fleet managers and workshops in a simple and secure way. We're constantly improving our driver app and adding new offers and features that make MAN drivers' jobs even easier.

SMART SOLUTIONS.

MAN Now

With MAN Now, you receive exclusive vehicle functionalities and upgrades, allowing you to modify your truck software to meet your requirements, any time, any place – and all without having to drop into a MAN service outlet. Thanks to the new and convenient over-the-air technology, you can easily enable and expand functions or add new ones. Thanks to these retrofitted modification options you are more flexible in the vehicle configuration. As no visit to the workshop is required, you increase the vehicle uptime and efficiency.

The following features are available for all vehicles with a model year of 2020 or later:

- MAN OnlineTraffic
- MAN MapUpdate

The following features are available for all vehicles with a model year between 2022 and 2024:

- MAN LanguagePackage
- MAN LanguageRecognition
- MAN Idle Shutdown
- MAN EfficientCruise®
- MAN EfficientRoll
- MAN TimeInfo
- MAN TimeControl
- MAN TipMatic® driving program

The first usage of MAN OnlineTraffic per vehicle is free.

MAN SimplePay

Your trucks become digital wallets that can be used to pay for all the usual transactions that occur in the driver's daily business. The payment platform MAN SimplePay also offers a user-friendly user interface for fleet managers and provides full cost control in a timely manner.

MAN SimplePay can make everyday work easier: For example by instantly approving requests, confirming payments and consolidating invoicing. Or with full transparency and time savings for the fleet manager – all costs are in one system (dashboard). The payment is easily processed via the MAN media system in the vehicle, giving you greater security for transactions.

The portfolio (= use cases and payment options) of MAN SimplePay is constantly being expanded. When the service feature is activated in the MAN SimplePay portal, the new features are automatically imported over-the-air into the vehicle.

Technical requirements for these features are a RIO Box, registration on the RIO platform and activation of your vehicles. The range of over-the-air features is being continually expanded.

Some of the features illustrated in this brochure are not part of the production series generally described here.

Both the vehicle's air conditioning system and refrigerator contain fluorinated greenhouse gases (R134a / GWP 1430 with up to 1.15 kg; 1.6445 t CO₂ accordingly).
